CABLES

A.V. CABLES

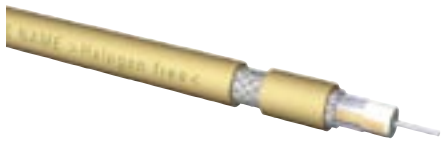

MAINS CABLES

A SOUND CONNECTION!

## INTERCONNECTS

### THE NAME

At this price we are pretty sure you will not find another interconnect which sounds just as well and has been built with the same high quality materials like dense Silver coated O.F.C. and Hulliflex®. It received a well earned WHAT HiFi? five star rating in 2004!

### THE BAY C5

This friendly priced interconnect combines Silver coated O.F.C. conductors with a double screen of our worldwide patented Linear Structured Carbon® (L.S.C.). A very flexible cable with a high screening factor. A real general purpose interconnect.

### THE D-300

With the same high value-for-money ratio this is the heavier version of our The BAY C5 with the same coaxial built but with a thicker multistrand center conductor for even more accurate sound reproduction. One of the best unbalanced interconnects in our program.

### THE SOURCE

Our answer on two questions: what sounds great and at the same time doesn't cost a fortune. Very fine metal technology combined with L.S.C. and Hulliflex® is all you can wish for in one cable. A highly regarded product that will satisfy even the most demanding music lovers amongst us. The bright orange jacket makes it also a feast for the eye!

### THE D-102 III

With so many awards, including the precious WHAT HiFi? "editors choice" and "product of the year" notations, the expert opinion is unanimous: a clear overall winner that is also an excellent solution for Multi Channel applications. The sound is pure, clean and very spacious with an extremely high resolution. Available in both balanced and unbalanced configuration.

### THE SECOND®

The SECOND® has a very natural and spacious signal transmission, due to its Linear Structured Carbon® (L.S.C.) metal free signal conductors. Therefore also ideal as a microphone cable for extremely critical recordings. It delivers a real, natural and, most important, unelectronic feel to acoustic music. Due to the L.S.C. the high quality will stay the same over time!

### THE FIRST® ULTIMATE

With our The First® we were the very first company in the world who had an all metal-free signal conductor. This next generation The FIRST® ULTIMATE is also made of Linear Structured Carbon®. This means the cable doesn't only sound superb when you buy it but will continue to do so for ever, due to the absence of ageing. It looks the way it sounds: smooth and perfect.

### THE INTEGRATION

Fusion Technology (a very special alloy of Copper, Zinc and Silver) applied in four separate conductors with L.S.C. and three different screens is what The INTEGRATION is made of. It produces very rich detail, extreme resolution and excellent space. Protected by a brown Hulliflex® jacket. Winner of the HiFi CHOICE Gold Award 2004 - best interconnect!

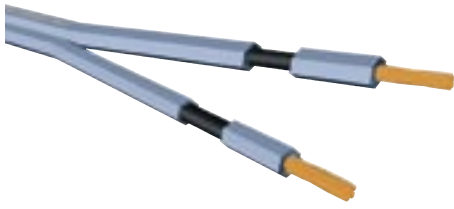

### THE JUBILEE

Just like our The D-102 III but with one magnificent difference: the three conductors are made of the highest grade pure Silver! This recipe produces dreamlike musical properties: very smooth in detail and high frequencies whilst the bass reproduction and the enormous depth of image are exceptional and rarely to be found for this price. Simply the best!

## LOUDSPEAKER CABLES

### THE SKYLINE

With this cable we prove our point that an elementary but well designed cable can still be friendly priced whilst performing like there is no tomorrow. Luckily the L.S.C. coating and Hulliflex® jacket prevent this cable from ageing.

### THE SNOWLINE

Very good performing twinlead speaker cable. Looking at The SNOWLINE it's hard to believe that such a slender cable is doing the job. This is the perfect solution in any budget audio system where performance is preferred over bulk. Highly recommended.

### THE CLEARWATER

Already sold in hundreds of kilometers. A well balanced combination between excellent sound quality and high flexibility. The flagship in our lower priced non-Hybrid speaker cable range. The shape of the jacket makes installation a piece of cake.

### THE ROYAL JADE

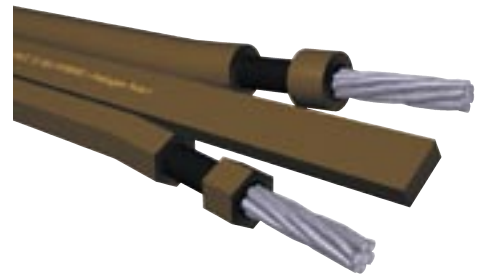

Very spacious reproduction and high resolution, unsurpassed in quality when related to the price. That summarizes what The ROYAL JADE stands for. With its design to fully maximize its transmission qualities this cable should be very high on the demanding audio lover's shopping list.

### THE CS-122

Don't let its friendly cream-colored Hulliflex® jacket fool you! This is a cable with a long standing reputation. The Hybrid lay-out of metal and L.S.C. make this cable close to perfect. Sound quality and lifespan are on the highest level. This multiple award winner is for the bass lover who also likes detail.

### THE D-352

Hybrid version of the long time performer D-352. With 10 Gauge conductors it's the CS-122's big brother with a midband articulation rarely to be found in any other speaker cable. The L.S.C. coating takes care of the smooth high frequencies and natural sound.

### THE MAGNUM

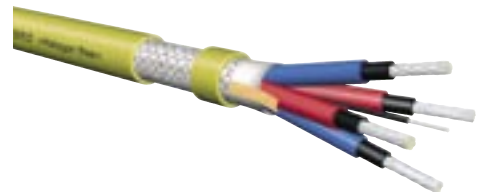

At some point you just need a maximum of quality metal between your poweramp and speakers. That's where The MAGNUM comes in. The combination of AWG-8 metal conductors, a thick layer of Linear Structured Carbon® and heavy dark red Hulliflex® jacket make for unsurpassed and durable listening pleasure without any compromise what so ever.

### THE WIND

The answer, my friend, is blowing in The WIND! This Mk II is a highest quality multi core single conductor with a very complex, computerdesigned, strand construction. Coated with our patented L.S.C. and finished with an outer Hulliflex® jacket this is as close to perfect as you may ever want to come and at a reasonable price for that!

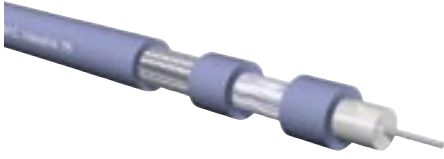

### THE INSPIRATION

Based on the same Fusion Technology as our interconnect The INTEGRATION they are a match made in heaven! This speaker cable has a so called star quad configuration with a center ground lead to avoid signal interference, thus keeping your noise floor down allowing it to reveal more and richer detail without a trace of harshness. Also for bi-wiring!

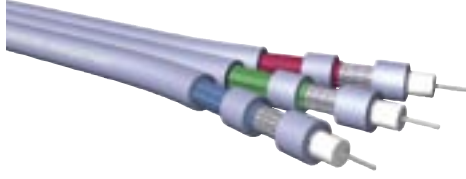

## A.V. & MAINS CABLES

### THE VIDEOLINK 75

Being the thicker version of our The VIDEOLINE 75 this is our ultra high grade solution for all 75 Ohm situations. Typical application areas are video connections, digital (SPDIF) links between CD or DAT-player and DA-converter, AD-converter to digital recorder linking and use in home theater connections where quality is, of course, directly visible.

### THE COMPOLINK 75

This component video cable is the more thicker, rugged version of our The COMPOLINE 75, designed for even longer distance cable runs without appreciable signal loss. The result of this cable is improved picture quality, which consists of better color saturation and enhanced clarity and brightness as well as extremely accurate, noise free pictures.

### THE OPTOCOUPLER

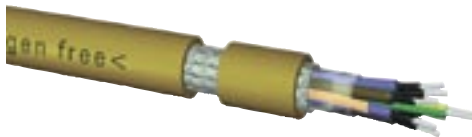

Our The OPTOCOUPLER Mk II has dreamlike specifications like a data transmission speed of over 250 Mbit/sec(!). Superior lenses in sturdy Toslink connectors and an extreme flexibility: they are the ingredients for one of the very best optical cables available on the market. Clean sound and bristle sharp images are the reward when applying this cable.

### THE SCART

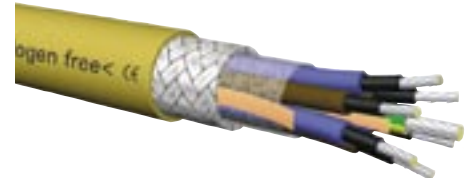

Gold plated contacts in a rugged Cobalt blue metal housing terminate this "fully wired" SCART cable. The combination warrants clean, crisp and sharp images with superb color definition, excellent contrast and fine detail as well as great audio quality, even over longer cable lengths. One of the best and most complete in its field.

### THE MAINSSERVER

This is our mains lead, designed for use with low power consumption equipment up to approx. 6A. Unlike conventional powerline filters this cable does not employ any filtering components in series with its AC current path; series impedance (reactance) is absent. Our powerleads are an easy way to upgrade your system dramatically at minimum cost!

### THE MAINSSTREAM

Most experts agree that cleaning up the mains is an effective way to improve your sound and/or AV system. The MAINSSTREAM (BS) is specifically designed for use in combination with power amplifiers. That they do their job is a.o. proven by the "Outstanding Powercord" election award by the famous Super AV Magazine in Hong Kong!

Once you're done shopping for your electronics and are going to set things up, there are two things left to do: first of all to find the time to listen and enjoy and even before that to get a set of the best cables available to connect your equipment in the proper way. That is exactly what this brochure is all about: cables! We've tried to present you (part of) our program of high-end interconnects, loudspeaker cables, AV cables and mains leads in a logical order. When you see the name of a certain interconnect it is presented to you on a specific colour. To make an optimum combination with a loudspeaker cable from our program you just look at one of those that has the same color behind it's name: a perfect match is made! The AV cables all have their specific field of application as explained in the text. Our Mains leads (The MAINSSERVER and The MAINSSTREAM) feature a unique embedded powerline noise suppression filter. This filter structure suppresses both existing types of powerline contamination, i.e. differential mode (across the lines) as well as common mode (simultaneous on both lines) noise components. Due to their design they do not exhibit any current limiting, resonance or sluggish response to current demand. Both cables have an official VDE approval and are also laboratory and hospital approved products. You can find our complete cable program with specifications on our website.

Since cables do make a big difference we urge you strongly to put some time in selecting them. The final result will be a situation where your equipment can deliver an optimum performance and give you many hours (and years) of high quality entertainment because that, in our opinion, is what audio (and video) is all about. ENJOY!
